

Whirling Disease in Southeast BC

Works Cited, David DePape

April 23-24, 2026

The following acknowledgements, list of cited literature, and photo/video credits are provided here for Mr. David DePape's presentation materials for the online training event: [Whirling Disease in Southeast BC](#), April 23 - 24, 2026; We regret that the slides addressing these acknowledgements and references did not make it into the event recordings and hope this document will serve as an accessible resource while also giving thanks.

Acknowledgements

David acknowledges all of the tremendous work done on whirling disease by the Aquatic Invasive Species team at Alberta Environment and Parks. As the threat of whirling disease to Alberta's fisheries resource was emerging and investigations began in earnest from 2016 -2020 staff worked diligently to better understand the disease and quantify it's biological and socio-economic impacts on Alberta. Work completed during that time contributed significantly to the scientific body of knowledge and understanding of the disease and is helping to inform management decisions in Alberta, BC and elsewhere today.

Additionally, David acknowledges the following work for which he was given permission to include in his presentations, including the summary of the surveillance work conducted on the Crowsnest River by Clayton James et. al.; decontamination SOP's and the 'how to' demonstration video by Jay White (Aquality Environmental Consulting Ltd.), and photos of many of the decontamination, laboratory sampling, surveillance and public outreach related activities courtesy of Lisa Schaubel on behalf of the Fish and Wildlife Stewardship team.
